Software Development and
Technical Consultancy Services.

Software adapted to suit your business

Hawk Based Software

Computer ConQuest specialises in tailoring your existing software packages to work in the way you want them to.

However large or small your business, our software developers can work to improve the efficiency of your business immeasurably.

We work with you to find out what you need then show you how this can be achieved.

Software adapted to suit your business

Our software developers are creating applications across the whole business spectrum, from finance to management to engineering.

Don't be tied to generic solutions designed for other people. We can design a system to do what you want it to do.

Features that can be designed around you

Hawk software can be designed to meet your needs. We are building new modules all the time and can design them specifically to meet your needs. Modules already developed and available now include:

Don't be tied to generic solutions designed for other people. We can design a system to do what you want it to do

Modules currently available:

- Timesheets
Incorporate employees' timesheets into your own application: design them how you want; style, data, format—everything can be tailored for your needs.
- QuickBooks Interface
Integrates fully with QuickBooks Accounts program
- Exchange Interface
Fully integrated with Exchange, Outlook Calendar and Contacts can be used within your program
- Excel Interface
Use Excel and other Microsoft programs? Need data from old Excel files in your system? The Excel interface allows you to do just that.
- Purchase and Expense Manager
Record purchases and expenses; integrate with all relevant departments and software

- File Library
Store company files centrally. Offsite back-up for increased peace of mind. Distribution to all authorised parties without time wasted on emails, database uploads or data transfer rates
- Assets Manager
Exceptionally flexible data storage system, allowing you to store any custom data you wish
- Client Detail Management
Organise contacts in Outlook or other software and they are automatically synched with your software; one location for all contacts
- SMS texting
Automatically send text messages to mobile phones, e.g. as a reminder for appointments
- Appointments
Co-ordinate appointments, Inform all relevant parties, Record to relevant software system e.g. Accounts
- Picture sharing
Link pictures to other data, e.g. appointments dates, clients, offices as required

Case Studies

As these modules show, our Hawk technology can be used to fulfill many different needs. Below are two case studies of programs produced by Computer ConQuest for our clients, they have been named **Condor** and **Armadillo**.

Condor

Condor was developed for a medical treatment practitioner. He needed a system which would allow him to make appointments for his clients over his range of clinics, with different consultants having access to a patients medical history, photos of previous ailments and other important information. He required an automated system.

Our Software Development team was able to save him time and money by integrating Outlook Contacts and Outlook Calendar to provide a central location for staff to share client and appointment details. They linked to our Picture Sharing functionality enabling consultants to share images of treatments needed for diagnosing and treating patients in different clinics and in some cases over different counties. Our team developed the SMS text message module to send automated appointment reminders to clients.

The client was so impressed with the work done by our team that the application is being installed in all branches of his clinics.

Armadillo

Armadillo was developed for a particularly demanding client. Ourselves. We needed a tool which would combine all aspects of our business in one easy to use, simple application.

The most important design feature of Armadillo is a system with the ability to work seamlessly on or offline. This allows our consultants to work on the move and in remote locations where there is no internet. Files are automatically synched over the net and stored on each machine running the application. Every time a file is updated, the information is transferred to every computer in the system. This enables large amounts of data to be transferred safely and securely without the problems of excessively big cumbersome emails.
